Parte A. DATOS PERSONALES

Nombre	Anahí Luciana		
Apellidos	Bonatto Caldiz		
Sexo	No Contesta	Fecha de Nacimiento	
DNI/NIE/Pasaporte			
URL Web			
Dirección Email			
Open Researcher and Contributor ID (ORCID)	0000-0001-7595-3648		

A.1. Situación profesional actual

Puesto	Postdoc		
Fecha inicio	2024		
Organismo / Institución	Istituto Nazionale di Geofisica e Vulcanologia		
Departamento / Centro	UF3 - Sismologia - Effetti di Sito - Pericolosità sismica. / INGV Roma		
País	Italia	Teléfono	(+39) 06518601 - -
Palabras clave	Sismología; Geofísica		

A.2. Situación profesional anterior (incluye interrupciones en la carrera investigadora - indicar meses totales, según texto convocatoria-)

Periodo	Puesto / Institución / País
2023 - 2023	Visit guide / Magma Cultura / España
2020 - 2022	Adjunct Assistant Professor / Universidad de La Serena / Chile
2017 - 2018	Content developer / University of Cambridge / Reino Unido
2016 - 2017	ICTP-TRIL Postdoctoral Fellow / Istituto Nazionale di Geofisica e Vulcanologia / Italia
2015 - 2015	Maternity leave (7 months)
2008 - 2012	PhD fellow (JaePredoc 2007) / Consejo Superior de Investigaciones Científicas / España
2008 - 2008	Maternity leave (4 months)
2004 - 2007	Teaching Assistant / Universidad Nacional de la Plata / Argentina

A.3. Formación académica

Grado/Master/Tesis	Universidad / País	Año
Doctor en Ciencias de la Tierra	Universidad de Granada / España	2013
Master Universitario en Geofísica y Meteorología	Universidad de Granada / España	2010
Geofísico	Universidad Nacional de la Plata / Argentina	2007

Parte B. RESUMEN DEL CV

EDUCATION AND POSITIONS

I graduated in 2007 with a degree in Geophysics from the Universidad Nacional de La Plata (UNLP). In 2008, I was awarded a Jae-Predoc scholarship by CSIC to pursue postgraduate studies. After my first maternity leave, I completed an MSc in Geophysics and Meteorology in 2010 and a PhD in Earth Sciences in 2013 at the Universidad de Granada, earning a Special Mention for my MSc thesis at the García-Siñeriz Prize in 2011. Following my second maternity leave, I was awarded a TRIL fellowship to work at Istituto Nazionale di Geofisica e Vulcanologia (INGV-Italy). In 2017, I joined the Isaac Physics project at the University of Cambridge, focusing on outreach activities. From 2020 to 2023, I served as Adjunct Assistant Professor at the

University of La Serena (ULS), teaching (8 to 10 h a week), mentoring undergraduates and conducting research through the ULS PIA program. In 2023, I briefly worked for Magma Cultura in STEAM outreach activities. Since 2024, I have been a postdoctoral researcher at INGV, focusing on seismic studies.

SKILLS AND RESEARCH

My expertise includes weak signal detection through receiver functions (RFs), cross-correlation or stacking. As well as coding (Python, Bash, AWK, Fortran), deploying seismic networks, and analyzing large datasets in diverse tectonic settings. I have led research in major international projects like TOPOIBERIA, SIGHT, FONDECYT Regular 1202007, AdriaArray, and AdriaLab. I have published 7 articles (4 as first-author), 5 conference papers (2 as first author) and a dataset, reflecting my ability to lead international collaborations.

My research focuses on the mantle transition zone (MTZ), particularly the 410 km and 660 km boundaries, as indicators of thermo-chemical variations. During my PhD, I developed custom codes to create the first topography maps of these discontinuities in the Ibero-Maghrebian region. I have expanded my research to subduction zones (Western Mediterranean, Chile-Argentina), volcanic hotspots, and stable regions. Under the SIGHT project with Dr Silveira, I conducted the first comprehensive RFs analysis of mantle plumes beneath the Canary and Madeira archipelagos, revealing differences in their magmatic processes. Collaborating with Dr Piromallo and Dr Cottaar, I investigated MTZ structures beneath the Chile-Argentina flat subduction zone, revealing significant compositional variations. As part of AlpArray, I contributed to a receiver function dataset and a high-resolution Moho map for the Alps. Currently, I investigate slab-mantle interactions in the Apennines with AdriaLab and AdriaArray.

Under the FONDECYT Regular 1202007 project with Dr R Amorín (IAA-CSIC) as PI, I developed a Python-based algorithm to identify over 20,000 galaxies with extreme emission-line properties with data from the Dark Energy Spectroscopic Instrument (DESI), showcasing the versatility of my signal processing skills. This work allowed us to conduct a detailed statistical analysis of the physical and chemical properties of the sample. A manuscript is currently in preparation (Amorín, Bonatto et al., *Astronomy & Astrophysics*, in prep.)

OUTREACH

I have presented my research at 23 major conferences, given seminars in Spain, Italy, Argentina, Chile and Portugal, and participated in academic interviews. I contributed to the World Pendulum Alliance by installing a remotely controlled pendulum system at ULS, presented at the XXIII Simposio Chileno de Física.

OTHER CONTRIBUTIONS

I have contributed as a reviewer for high-impact journals, including *Frontiers in Physics* of the Earth and Planetary Interiors. I supervised a BSc theses at UNLP in 2015 (P. Bagdo's) and co-supervised a summer internship at the University of Cambridge in 2017 (S. Knowless). In 2022, served on an evaluation committee for a UNLP BSc thesis (M. Z. Ruiz Moreno). As an Adjunct Assistant Professor at ULS, I taught "General Physics" (60 students) and "Vibrations and Waves" (15-25 students), both 8 hours per week, and mentored top-performing undergraduates (2 in 2021, 5 in 2022).

Parte C. LISTADO DE APORTACIONES MÁS RELEVANTES

C.1. Publicaciones más importantes en libros y revistas con "peer review" y conferencias

AC: Autor de correspondencia; (nº x / nº y): posición firma solicitante / total autores. Si aplica, indique el número de citaciones

- 1 **Artículo científico.** (1/7) Luciana Bonatto (AC); David Schlaphorst; Graça Silveira; João Mata; Chiara Civiero; Claudia Piromallo; Martin Schimmel. 2024. Unveiling the distinct structure of the upper mantle beneath the Canary and Madeira hotspots, as depicted by the 660, 410 and X discontinuities. *Journal of Geophysical Research: Solid Earth*. Wiley. 129-e2023JB028195.
- 2 **Artículo científico.** Michailos Konstantinos; György Hetényi; Matteo Scarponi; et al; Wojciech Czuba; (6/26) Luciana Bonatto. 2023. Moho depths beneath the European Alps: a homogeneously processed map and receiver functions database. *Earth System Science Data*. Copernicus Publications. 15-5.
- 3 **Artículo científico.** (1/3) Luciana Bonatto (AC); Claudia Piromallo; Sanne Cottaar. 2020. The Transition Zone Beneath West Argentina-Central Chile Using P-to-S Converted Waves. *Journal of Geophysical Research: Solid Earth*. AGU Journals. 125-e2020JB019446.
