Summary of CV

This section describes briefly a summary of your career in science, academic and research; the main scientific and technological achievements and goals in your line of research in the medium -and long- term. It also includes other important aspects or peculiarities.

My research work (since 2006) has mainly focused in the study of X-ray emission of compact objects (BH, i.e. black holes) both from an observational and a theoretical point of view. Previously, I obtained my master thesis in 2003 working in the development of the "Input Catalogue for the Optical Monitoring Camera on-board the INTEGRAL satellite". I obtained the PhD in 2008 (max. qualification Cum-Laude) working at the European Space Astronomy Centre in Madrid (ESA) and studying the hard X-ray emission from BHs (PhD thesis entitled "Study of galactic black holes with the INTEGRAL mission" with J. M. Mas-Hesse as my PhD thesis supervisor).

I have developed my career through **5 postdocs at U. of Cambridge (UK, 2008-2009), U. of Crete (Greece, 2010), O. Astronomico di Brera (Italy, 2011-2013) and at Prague (Czech Republic, 2014-2020)** first at the Czech Technical University and secondly at the Astronomical Institute of the Czech Academy of Sciences. During this time I have become an specialist in X-ray astronomy of accreting BHs (stellar, medium size and supermassive), with a special emphasis in the (X-ray spectroscopy and timing) analysis of their X-ray data from X-ray missions (INTEGRAL, XMM-Newton, Suzaku, Swift, etc.). As a result of this research I have > 200 publications with > 5000 citations from which **4 are in Nature and 3 in Nature Astronomy** (2009-2021), covering the topic of my current grant as a PI). In total **I have participated in > 10 projects** (funded by FP7 EU, STFC, INAF, GACR, ESA, CSIC, etc.) in 5 different countries (including Spain; U. of Barcelona and ESA-INTA-CSIC at Madrid) **acting as a PI in two of them**. I have given > 50 talks in international conferences, with > 10 Invited (including IAU and EAS). Currently I am back to Spain with a **Ramon y Cajal 2019 fellowship**.

I was the Principal Investigator (PI) of the 3 year-long GACR project, GA18-00533S (164000 euro/total) entitled “Reverberation from black hole accretion discs” funded by the Czech Grant Agency (GACR) to be held in Prague (ASU-CAS, Czech Republic) until Dec 2020 (starting date: 1 Jan 2018). With this grant I was extending my observational work helping in the development of a new code for the study of the physical processes occurring in the close vicinity of BHs, where effects due to General Relativity are important. This project led to a paper published in Nature Astronomy (2020).

I was also serving to the Study Science Team (SST, which is a group of leading experts in the field) of the pre-selected ESA M5 mission THESEUS where I was also Chair of its Science Working Group called "Time-domain Astronomy" during its phase A. Currently this mission is under Phase-II evaluation for the ESA M7 call.

Additionally I am participating in the optical follow-up of Gravitational Wave Source events detected by the LIGO/VIRGO experiment and in the understanding of physical processes leading the extreme X-ray emission from other highly energetic astrophysical transient events.

Teaching:

- Previous supervisor of Master Thesis work at VIU and current professor of the Master Universitario en Fisica y Matematicas (FISyMAT), Universidad de Granada, (Spain).
