Summary of CV

This section describes briefly a summary of your career in science, academic and research; the main scientific and technological achievements and goals in your line of research in the medium -and long- term. It also includes other important aspects or peculiarities.

I currently enjoy a Ramón y Cajal fellowship at the University of Murcia. My day-to-day focuses on the success of the two R&D projects funded in national competitive calls in which I act as PI (OPEN and ONFIRE), as well as on their continuity and impact for further proposals, supervising one Phd student and two postdocs, and participating in teaching activities.

The bulk of my research develops in the fields of regional climate modeling (with one paper in Nat. Commun. as 1st author) and its application for renewable energy resources assessments: variability, complementarity and vulnerability to climate change (with another paper in Nat. Commun. as 1st author), being this latter the line that I lead within my host group (besides OPEN, I have formerly led two other R&D projects on that topic, CLIMAX and EASE), although I also collaborate in other works. In particular, in the last years, the study of links between climate and wildfires has become one of my main scientific interests (with two papers in Nat. Commun. and one in PNAS as co-author).

I am lucky, I was at the correct space-time coordinates many times and I did the trip on giants' shoulders.

After my BSc in Physics (UCM, 2006) and a MSc on computational scientific tools (UMU, 2008), I formed as climate modeler during my PhD at the UMU under the supervision of J. P. Montávez (completed in 2011, awarded with European Mention and Summa Cum Laude) and several training and research stays at the ECMWF, the HZG and the Max Planck Institute of Meteorology. This ability served me to get involved in the European branch of the WRCP-sponsored CORDEX initiative and in a range of cross-disciplinary research works (and >20 R&D projects and contracts) on natural hazards, geomorphology, paleoclimatology, air quality and other topics with links to climate variability.

In 2011, after my PhD, I moved to the IDL (Portugal) to work with R. M. Trigo, where I led research on large-scale climatic drivers and got involved in Portuguese national projects. In 2013 I moved to the LSCE (France) to work with R. Vautard, where I led the development of the CLIMIX model, a tool to evaluate climate change impacts on the energy mix, and, thanks to that, I got involved in the benchmark ISIMIP and FP7-funded IMAPCT2C projects.

In 2014 I obtained a 2-year "Doctors recruitment" competitive contract granted by the UMU (I ranked the 1st in the call, as I did again in 2018 when I obtained a 5-year grant in a "Young research leaders" call by the UMU) and returned to the UMU, where I have been working since

then with three short interruptions: a maternity leave in 2016, a frustrated attempt in 2017 to move back to the IDL to lead a 5-year project funded by a prestigious Portuguese programme (regretfully, I had to resign this opportunity soon after my incorporation for personal reasons), and a 8-month period as Profesora Ayudante Doctora at the UPCT (I left this position when I obtained the Ramón y Cajal grant in 2021).

Since my return to the UMU in 2014, I have continued the fruitful and fluent collaborations with my former IDL and LSCE groups and promoted new ones, e.g. with the BSC Earth System Services group, where I had an invited postdoctoral research stay in 2015 funded by the Severo Ochoa mobility programme, the GOTA group of the ULL, and the Earth System & Global Change Lab of the SUSTech at the international level (which resulted in several joint publications, one in Nat. Water), among others. I have co-authorships with more than 200 scientists from around the world.

My scientific production in Scopus comprises 59 documents (with a 75% of international collaboration, 83% of them in top citation percentiles and an overall Field-Weighted Citation Impact of 2.04), 35 in Q1-ranked journals, 4 out of which in Nat. Commun. (two as 1st author), one included in the IPCC report on impacts at 1.5°C warming (for which I also acted as referee, as I do for >20 ISI journals, including Nature), one selected by the Climate Innovation Window of the EU BRIGAID project, and one among the most read (Top 50) in Nat. Commun. from across the Earth and Planetary Sciences in its publication year. To disseminate and discuss my work, I regularly attend international conferences, with 35 contributions as 1st and presenting author.

In parallel, I collaborate in official teaching (600 accumulated hours), supervised one PhD Thesis and several BSc and MSc projects, and evaluated PhD and MSc theses. I was also member of the CLIVAR España committee from 2021 to 2023, participated in the organizing committees of three conferences, collaborated as Guest Editor of scientific journals on three occasions, and acted as referee for both the Andalusian and the Spanish National Research Agency, and for the ETH Zurich Postdoctoral Fellowship Program.

Finally, I was accredited with the I3 recognition in 2020, and as Profesora Titular de Universidad in 2023 by the ANECA.
